

Simple and Secure Remote Connection

InHand Connect Service

· Remote Access

· Multi-Site

· Cloud Service

· Secure VPN

1. Product Overview

InHand Connect Service (InConnect) is a one-stop connectivity service for enterprise customers.

With a user-friendly interface and simplified workflows, together with InHand networking devices, it helps enterprises quickly connect global business sites, enable interconnection between devices and information, and support IT modernization and digital transformation.

InConnect allows IT engineers to remotely access terminals connected downstream of routers/gateways for remote maintenance, program deployment, and building data channels for continuous terminal data reporting to business centers. Supported terminals include industrial PCs, servers, cameras, PLCs, HMIs, RTUs, controllers, and more.

2. Remote Connectivity Capabilities

Remote Device Communication

No.	Type	Description
1	User to Device	Users can access all site devices within their permissions.
2	Site to Site	Each site can communicate with other sites.
3	Device to Device	Devices within each site can communicate with one another.
4	Multi-Site	Multiple sites can communicate with one another.

Remote Office Connectivity

When users are at home or traveling, they can access internal enterprise network resources.

3. Key Advantages

- Fast and cost-effective remote network deployment: No public IP lines or dedicated hardware VPN firewalls are required. InHand devices can connect through 4G LTE or wired networks.
- Multi-end interconnectivity and access policy control: Supports remote access and control of on-site devices, while secure gateway mechanisms can restrict inter-device communication as needed.
- Automated network deployment: After routers and downstream devices are added, secure connections are established automatically, supporting smart IP mapping and real-IP communication.
- Data encryption and transmission security: Cloud servers combined with advanced access control and multi-layer encryption logic ensure network security.
- Multi-terminal access support: Supports Windows, Linux, Android, and iPhone clients, as well as terminal access for PLCs, HMIs, cameras, and more.
- One-stop service: Integrated networking devices and platform with cloud deployment, no local O&M required, and elastic scalability.

4. Product Features

Site Management

Feature Item	Description
Router/Gateway	Asset management for serial number, ICCID, IMSI, etc.; operational monitoring such as network status, traffic consumption, and signal history
Terminal Devices	Centralized management and maintenance for PLC/HMI and other terminal devices, with remote access support
Configuration Update	Batch remote configuration and task delivery management
Firmware Upgrade	Batch firmware upgrade and upgrade task management
Remote WEB	Remote access to routers for configuration changes
Operations Analysis	Carrier traffic statistics, connection statistics, and GIS device location tracking
Task Tracking	Management of all device system tasks, with online tracking of status and progress

Network Management

Feature Item	Description
Client Access	Supports multiple clients, user login, and access duration control; restricts accessible MAC addresses
Peer-to-Peer Network	Designed for remote device maintenance, supports maintenance for PLC/HMI and other devices, with virtual IP and real IP access

Feature Item	Description
Star Network	Designed for remote office scenarios, supports access to internal enterprise servers and file resources from home or while traveling
Network Permissions	Divides network groups and controls user access permissions to sites and account data management permissions
Traffic Statistics	Statistics for remote connection traffic consumption

Network Access Capacity

Item	Specification
Router Access Limit	Up to 4,000 access points per registered account
Terminal Device Access Limit	Up to 254 terminal devices per on-site router node

5. Compatible Hardware Products

Supported InHand product series:

- InRouter300
- InRouter600
- InRouter900
- InGateway500
- InGateway900
- InVehicle G710
- InVehicle G814
